

Dose-volume histogram — Lung_Patient_10

Curves further left are better for organs; the PTV curve should stay high, then drop sharply. Target curves should overlap; organ curves show the tradeoffs. Esophagus is on page 2.

DVH by structure — Lung_Patient_10

Same curves, one structure per panel, all plans, each annotated with that structure's protocol metrics.
Bold = clinically preferable: organs favor lower dose; PTV favors the value closest to goal within the limit. Grey = all plans are within 0.01 of each other. Amber misses a goal,

Clinical criteria — Lung_Patient_10

Organs: lower is better. PTV: closest to goal without exceeding the limit. Bold marks the best plan.

Grey rows: all plans agree within 0.01 — heart, lung and LUNGS_NOT_GTV max sit at 66 Gy because those structures abut the target. Amber misses the goal; red exceeds the limit.
